It seems that OpenJDK8 on Linux does not contain JavaFX, which DataWarrior uses for displaying help pages and for the conformer viewer. I suggest that you check, how to install openjfx for your Centos. On Ubuntu this would be: `sudo apt-get install openjfx`.

Of course, if conformers are not important for you and you use the help pages from [openmolecules.org](#) rather than the DataWarrior help windows, you can live without JavaFX. Alternatively, you might switch to OracleJRE 8, which contains JavaFX.

For upcoming DataWarrior on Linux installers, I will try to embed the JRE and JFX, such that one doesn't need to care about the proper Java installation anymore. The MacOS and Windows installers contain the JRE already since some time.

Thomas
