Hi!

I'm starting to use DataWarrior and I have a doubt about the Toxicity Prediction Results. What does it mean a none prediction? I'm asking because on the documentation, there is no mention to a none result, only to low/medium/high risk.

Does it mean that there is no risk predicted or that there is no prediction for that category? If it means that there is no prediction, why is that? Cause there is no information on the database to compare with my compound or is it a problem on the compounds structure I'm using?

Thanks!
