Subject: save image as SVG-file

I would like to save a 3D View in SVG format. if I right-click at the "3D View" window top bar I get a few options, one of them being "copy view image". if I click on it I get a new window titled "create image from view", which allows me to "copy image to clipboard" and to "save image as PNG-file", but I also see an unfortunately disabled option reading "save image as SVG-file". this option is enabled for 2D plots, but is there any way I can export my 3D plot into SVG format? I just want to embed that particular 3D plot snapshot into a publication without losing quality.

PS: thanks for such an impressive tool!
