Hi Christoph,

below «Data» you will find the entry «Add Row Number». This provides you a new menu to initiate and populate a new column able to accomodate larger intergers, too:

You may alter the column header, the integer to start to count with (unity, zero, or any other integer) as you like. Because it is a column, this then allows you to sort the table as as a whole like with columns about other entries (molecular mass, etc.) as well. This includes a descending sort, too. If wished, cells in this new column equally may serve as reference for further computations (Data -> Add Calculated Values).

Norwid
