Potentially the xfce desktop works quite similar to the mate desktop, too. Past running the default installation of the linux version of DW and update of the launcher,

you find /opt/datawarrior/DataWarrior.jar/images/DataWarriorLogo.svg equally accessible by an archive manager (instead of default OpenJDK Java) with an icon.

As a sidenote, you may find adding DW to the aliases (thread «Opening SDF file with Datawarrior from command line») useful, too.
