Currently, this is not possible. However, I hope to add an option soon that would allow to display and superpose the conformer of the 'current row' (the one with the red frame) to all other rows. In this context, it would make sense to also provide an option to synchronize rotation & translation of all rows with the 'current row'. One way of solving it would be to remember the rotation/translation state of the 'current row' whenever it is updated and apply that to any other row as soon as it is displayed. I will give it a try...
