
Subject: Exclude function in the structure filter does not work with 2 exclude groups

Hello forum,

I am not sure if I should post this in the bug reports or just in the functionality subforum but I have the following problem.

I have a database of around 1800 molecules and I try to specifically look for amines while filtering out alpha and beta amino acids. In the structure filter search I tried excluding -R(N,O,S) and =O as this would indicate a carboxyl group or carboxyl derivatives.

The problem is that it still shows amino acids after I used the filter with the exclude groups. I suspect it has to do with trying to use two exclude groups as there is no problem if I want to exclude a single group.
