
Subject: typing in text columns

I am annotating a data set in data warrior and so I created an empty text column. It seems to me that in order to edit values in the text cell I need to double click there. This becomes rather cumbersome when I am annotating large sets of data. Would it be possible to have the text cells function more like an excel spreadsheet where if the cell is highlighted I can just type the value I want in it?

Please let me know if I need to clarify my question. Thanks!

Patrick
