For creating a subset it is easier to use "File->New From->Selected Rows" after selecting some rows.

This replicates all other settings, e.g. filters and views.

Of course, ideally copy/paste should also recreate 3D-coordinates. As described in my other answer, copy and 'paste into table' now support structures/reactions and coordinates, but paste from the main menu doesn't do that yet. It will come...

Thank you for pointing this out and the example file.
