Thanks a lot.

However, with your example molecules with Mwt = 80 are labelled as 0 but all others are labelled as 1.

My problem is slightly different. For example, I want '1' only for the molecules with Mwt > 100.

I don't want any value (or want some distinct value e.g. '3' for molecules with Mwt between 80-100.

I am trying to find other ways. Let me know if you get some idea.

Thanks again!
