Two things come to my mind that do something similar:

- Within a view right mouse click -> 'Set the focus to row list' and choose 'selected rows'.

This causes this view only to draw non-selected rows in a grayed out color behind the selected ones.

- You may use an existing (or new) graphical view as filter: right mouse click on the header and choose 'Use view as explicit filter'. Whenever you select rows in this view, then these rows are the only ones shown in all other views.

Hope one of the options comes close to what you intend to achieve.

Thomas
