Thank you Thomas for your very quick response!

I have downloaded and replaced files, but the error persists!
It wasn't mentioned but it doesn't matter where you mouse over, it happens in both 2d and 3d plot view too.

I am not sure, but at least it feels like it creates less error messages now.
I'll dump here few molecule names from NIC database for witch it interrupts, in case that those might help you:
181100
262139
265309
293938
311999
405713
517954
527325
666270

Thank you once again!
Sincerely, Ignjat F.
