The box plot (as all other plots) use the default category sort order, which is alphabetical for text categories and numerical for numerical categories.

However, you may define a custom category order:
- in the table view on the respective category column header press the right mouse button
- select 'Set Category Custom Order...'
- in the dialog select 'Use Custom Order'. Then you may
  - manually drag and drop categories to re-order the list
  - or select other criteria as 'in ascending order by mean of <some other column> and press 'Sort categories'
- Press OK and you have changed the category order in all views
