Dear all,

I'm trying to install Datawarrior on my new laptop with windows 10, but get error message such: 'could not find Java 2 Runtime Environment'

I'm working with 64 bits machine, and indeed on the well documented webpage of openmolecules I noticed that installation on such a machine might be difficult.

I tried to install the 32 bits version but without success

I tried to install a Java update but without success.

Does someone has an idea ?

thank you very much for your help,

Michael.

Dear Michael,

this looks like the JRE is not properly installed. What do you get, if you open a terminal and type 'java -version'?

This should tell you, whether the JRE is available and whether it is 32-bit or 64-bit. (see installation issues description).

I get this:

```
java version "1.8.0_131"
```

```
Java(TM) SE Runtime Environment (build 1.8.0_131-b11)
```

```
Java HotSpot(TM) 64-Bit Server VM (build 25.131-b11, mixed mode)
```

If you don't get '64-bit' somewhere, then it is 32 bit.

Best wishes, Thomas
