I installed the most recent version (5.0) and when I open the app, it gives the hourglass cursor for a couple seconds and then nothing loads. Java 32 and 64 bit versions are installed on my 64 bit Win7 PC and are working correctly. I've tried closing all other apps that I can thinking it could be a memory/RAM issue but it doesn't help. I reinstalled DW and same thing. I've tried "running as administrator". Any ideas what could be wrong? Perhaps I could try an older version of DW?

Notified IT and an exception was made to allow DW to run with SentinelOne, a security app that our institute installs on all network-connected computers, which was the cause for DW failing to launch.

I know this is old, but my company is also running Sentinel One EDR software, and it seems to be blocking DataWarrior from running, do you happen to know what specific exception you had to make for DataWarrior to work?
