Hi,

As far as I am aware the labels in plots are always colored by the same color as the data points. Is it possible to color all labels in a color of choice?

All the best/Evert

Hi Evert,
I think you can do what you want in the 'set graphical view options', in the colour tab, set label background.

Hi,

As the name implies, that just changes the label background colour. I would like the labels itself to be black. Now they are colored the same as the data point they belong to, which could be yellow, and thus hard to read.

Thanks/Evert
