Subject: Adjust axis range

Hi,

Is it possible somehow in a plot to adjust the axis ranges manually (i.e. where the x-axis crosses the y-axis and vice versa)?

Say If the default plot shows an axis range from 0 to 10 I would like to be able to change it to 4 to 10.

Cheers/Evert

Hi Evert,

if you click on the 'xyz'-button on the view header, then a popup opens, which shows a blue bar for every axis.
You can drag the thumb area (left or right ends of the bar) towards the bar middle, which changes the axis range.
You may also double click the thumb area to type in a new lower/upper range limit. Finally, within the view you
may use a scroll gesture (e.g. on a touch pad, or mouse scroll wheel) to zoom in and out.

Does this answer the question or have I misunderstood?

Thomas

Hi Thomas,

You understood perfectly - the sliders under the xyz button just do what I want - so obvious that I missed it.

Thanks for maintaining this amazing program!

All the best/Evert
