Subject: Enabling filter/plot views

I am using Data warrior 5.0 on Mac running High Sierra 10.13.6 (17G65).

I seem to have issues applying filters to data. There may be multiple separate issues, but I am not sure.

For a small file (200 compound) I at some point closed the filters panel, and can't seem to get it back. I have tried edit>enable all filters and nothing happens. The area where the filters usually appear at the right remains blank. I have similar issues if I close plotting windows and later want to view plots of data. If I close a plot, how do I get it back?

The other issue I have occurs with a larger file (30,000 compound supplier catalog). I can see some preset filters, but the edit> add new filter returns uncaught exception -1.

Thanks for any suggestions!

Patrick

Hi Patrick,

You should always be able to add new filters with "Edit->New Filter...". If this results in an exception, then there must be a bug, most likely connected to some issues in the data file, because I am not aware of this problem. Or your datawarrior.jar file is damaged.

New views can always be created with a right mouse click (on Macs without a right mouse button a ctrl-mouse-click should do it) on any view title bar, which is the typically blue or gray bar on top of any view. If there is no view, then a right mouse click in the empty view area does the same.

I suggest that you download the newest DataWarrior beta patch files from openmolecules.org/datawarrior/dw500x.zip, open the archive and move the files into /Applications/DataWarrior.app/Contents/Java/ (to open the DataWarrior application folder, make a right mouse click on it and select 'Show Package Contents'. If you still get the uncaught exception, then I would be glad, if you could send me the data file with exact instructions of how to reproduce the error. In this case I would fix it quickly, because the next major update is due by the end of the year.

Hope this helps and thanks in advance, Thomas

Thanks for the response. I did download the latest version and no longer have issues.
