
Subject: Structures not visible on 2D-axis

Hi,

For 2D-graphical views, if I select a structure column (say from a r-grp decomposition), the structures no longer show on the axis. If I select the same r-group column in a 3d-view the r-groups show correctly.

Thanks,

Angus

Hi Angus,

I assume that this was a bug in an earlier version. You may check in the current pre-release, which is available as zip archive containing some files that replace older ones in the installation folder of the official 5.0.0 version. You may download the patch files from openmolecules.org/datawarrior/dw500win.zip (Windows) or openmolecules.org/datawarrior/dw500x.zip (Linux and OSX).

Thomas

Thanks Thomas, I've looked at my file again in more detail and noticed something odd. If the view is small, I can see the r-grps (attached image [rgrp_minimised](#)) but only the vertical lines of the grid (view set to show full grid). If I maximise this window the r-grps disappear and I lose the whole grid ([rgrp_maximised](#)). I've included an example dwar file from ChemBL where this behaviour occurs with R5 on the x-axis. Any thoughts how to deal with this?

Thanks,

Angus

Angus, thank you very much for posting files and reproducibly showing the issue. I have updated the logic when showing structures on axes on the 2D-view and hopefully fixed the issue. The dw500 zip files are updated.
