Subject: Option to Display Table Only

When you load in an SDF with a lot of data, i.e. >100 columns and >100,000 rows, DataWarrior can be very slow. I noticed this is because by default it displays the 2D and 3D graph views.
As soon as these graph views are closed, Data Warrior runs quickly again. I would recommend an option in preferences to be able to disable these views by default, or for these graph views to be disabled if the number of rows exceeds a certain threshold.

Thanks,

Simon.

Good idea. Now the graphical default views are only created if the number of rows doesn't exceed 10,000.
