Hi Tom,
Thanks for all the great improvements in the latest DEV build. However, I have noticed a bug has now been introduced.
If you create around 10 different filters of different types (slides, categories, text etc) on the right hand side, and save the session as either a DW file, or as a template. When you come back to re-open the DW file or apply the template, only a partial number of the filters are loaded. I have not seen this issue before, for example the Production build works perfectly fine in this regard, and previous DEV builds were fine.
So this is the latest 15th March datestamp DEV build on the Mac Build.

Thanks,

Simon.

Hi Simon,

thank you for your message. I tried to reproduce with a few files, but could not. From the description it sounds that one of your defined filters crashes the filter creating thread such that the remaining filters are not created. Possibly, the reason is already fixed or there is a special combination in your data and filter definition that causes the thread to crash. I just deployed a new dev update. I would be grateful, if you check, whether the problem persists or send me an example file that doesn't load properly.

Thanks in advance,

Thomas

Hi Thomas,
Okay, with whatever changes you have made to the newest DEV build, it seems to have fixed it as all my different DataWarrior files are showing all the filters again. Thanks so much!
Simon.
