I am trying to use a calculated column to sum the values per a text category but I keep getting "NaN" as the result. Can you tell what the problem is?
Attached is an example table...

The formula that gives NAN is:
cumulativeSumInCategory(plateID,"penalties")

I am expecting a new column that has the sum 14 for the first 3 entries and 7 for the second 3 entries, (same number for each of 3 rows).

BTW, I have no success with frequencyInCategory either. Can the frequency count unique text strings (eg. SMILES) as well as numbers?

Thanks,
Greg

Dear Greg,

the computation fails because the instruction contains an error in the syntax. In your example, plateID and penalties are not variables, but label-like column headers. For this reason both are to be enclosed in quotes. To enable a computation, the formula thus shall be written as cumulativeSumInCategory("plateID", "penalties")

Note, `cumulativeSumInCategory` adds line by line the penalties for the plateIDs, and accounts for all lines already scrutinized. This pattern is used in column «freq3» in the example attached below.

Your description of the anticipated results differs from this, though. It is better described by the formula categorySum("plateID", "penalties") This pattern is used in column «freq4»:

Norwid

The screenshot shows a software window titled "probe.dwar". The main area contains a table with the following data:

	ID	plateID	penalties	SumofPenalties	freq3	freq4
1	9482	2001-X56-A001	10	NaN	10	14
2	9533	2001-X56-A001	3	NaN	13	14
3	8374	2001-X56-A001	1	NaN	14	14
4	1299	2001-X56-A002	5	NaN	5	7
5	2355	2001-X56-A002	2	NaN	7	7
6	1432	2001-X56-A002	0	NaN	7	7

To the right of the table is a panel titled "Add Calculat...". It contains the text "Please enter a formula: categorySum('plateID', 'pe...)" and a button "Add Variable". Below this is a checked checkbox "Overwrite existing column" and a label "Column to overwrite: f". A "Help" button is at the bottom of the panel.

Thanks so much this fixes my problem with several of these functions.

regards,
Greg
