Subject: How to avoid shuffling of columns after importing?

After importing an sdf file, I want to keep the columns in the same/original order. But Data Warrior shuffles them in alphabetical order I think. How to avoid this?

Thanks
Jitender

Currently, there is no way to avoid that. When reading an SD-File DataWarrior analysis in a first step, which fields are present in the SD-file's records. Different records may have different field names in a different order, even if the order is usually the same. During this step the list of available field names is created alphabetically and then converted in a column list. I will check, whether to change this and to use the order of field name occurrence in the SD-file.
