1) How do I change the XY axes range?

2) If one of my axes is being used as a filter (such as a slider), it would be useful to have the graph scale/zoom accordingly -- is there a way to do this?

1) If you change the value range of a data column (Data->Set Value Range...), all views use the new min/max values from this definition. Note that you can only enlarge the natural data range this way.

2) No, currently not. There is an automatic scale adaption for 2D-views (Graphical View Options), but so far it is only working for bar charts.

thanks. Ah, OK was looking to shrink the natural data range down, so I could focus on a subset. I played with the auto zoom option a bit -- seems like it works pretty well with the scatter chart too (?). And it looks like I can zoom in/out with the mouse wheel.
