Subject: Printing Form View Window to PDF

Hello,
I set up a Form View containing 4 columns and ~15 raws.
I would like to save a single Form View as a PNG image but I did not find the 'Save Image' functionality. So, I decided to use Print... to PDF; however, every time I save the PDF file, the content of the Form View does not scale properly to the size of the paper. I don't see "Adjust to xx% page size" or "Fit to Page size" or similar functionalities. How do you create a high-quality image of the Form View without using snipping tools or "Print Screen"?
Thanks,
I.

From the '+'-menu on the blue form view title bar you can select 'Copy View Image...', which opens a dialog with various options to copy or save a png in basically any resolution.
