This is rather strange and indicates that the office changes something crutial in your case. If you try to start DataWarrior from the command line, do you get any error message?

Hi Thomas

I am sorry, I find why datawarrior550 did not work in my PC(windows 10). I have to install the latest Visual C++, if not, windows 10 do not contain a key file(vcruntime140.dll). After I tried many times, so finally datawarrior550 work well.
If any one can not initiate datawarrior550, please try to install Visual C++, maybe it will be useful.
thank you, Thomas

Hi gianxj2004,

many thanks for figuring that out. On my Windows10 installation, vcruntime140.dll exists in the C:\Windows\System32 directory. If I rename it, I get your described behaviour: DataWarrior.exe doesn't start without any error message. The debug version DataWarrior_d.exe says, it cannot load the jvm.dll (the Java virtual machine). Evidently, the JVM needs vcruntime140.dll, which is often, but not always part of the Window installation.

If you google for 'vcruntime140.dll', you find sources to download this dll without the need to install VC++.

Thanks again,
