Subject: Hyperlinks that contain a semicolon get split in two

I was trying to update one of my DWAR files to generate hyperlinks for the DOI column values. I followed the instructions described in one of the previous posts and managed to get things working as desired except for one small problem -- DOI strings that have semicolon symbols (';') get split into two.

I have attached a minimal reproducible example as the "doi.dwar" file. Right clicking the field that contains the DOI string
"10.1002/(SICI)1521-3749(199808)624:8<1279::AID-ZAAC1279>3.0.CO;2-K "
provides two options in the "Open <Description> in Web-Browser" menu:

* 10.1002/(SICI)1521-3749(199808)624:8<1279::AID-ZAAC1279>3.0.CO
* 2-K

Is there a way to circumvent this without modifying the actual DOI field value?

File Attachments
1) doi.dwar, downloaded 493 times

This is now fixed. In DataWarrior the String "; " and a '/n' are allowed data separators. The code to separate the string here was too laze and also separated at a single semicolon. Now it is more strict to require at least one SPACE after the semicolon.

In addition, when directly clicking the link in a DataWarrior cell, the content was not URL encoded. Therefore the semicolon caused a problem. Now cell content will be encoded unless the column properties section contains a line like:
<columnProperty="lookupEncode0 false">

The change is deployed in the current dev update.

Thank you for the update. I have tested the latest version (e8efa7b) from the GitHub repo and can confirm that the bug no longer manifests.
