Hi Thomas,

Would you consider (and if it's possible) adding some additional charting options to DW? I'd be really keen on the following;

Multi-column scatter plot against the same X-axis

Profile plot

Radar plot

Beeswarm or violin plot

Thanks again for such an amazing resource, I use DW everyday for work!

Many thanks,

Angus

Hi Angus,

thank you for the suggestion. Violin plot is planned, radar plot I am not a big fan of, because the area sizes seem to imply something although they vary with the order of categories. I would prefer simple bar charts. However, there is significant interest, which I cannot neglect. Thus, they will also come. Simple profile plots should be possible currently using line connections in scatter plots...

Anyways, it will take some time, because there are a couple of things to be done first, which includes to improve the object architecture concept of views.

Thomas
