Hello everyone,

Is there a way to generate tautomers from either 2- or 3D structures with DW and to pool them (as for conformers) into the same target row ?

Thanks
Christophe

Christophe,

maybe the answer is «not yet», yet there are multiple programs/services available to generate them. Though his focus was the description of tautomers, one presentation by Marc Niclaus of NIH mentioned their tautomerizer to consider 80+ rules

<https://cactus.nci.nih.gov/tautomerizer/>

requesting SMILES strings as input as an example.

Regards,

Norwid

Hi Norwid,

Thanks for your answer and the link.

I also found that the MarvinSketch suite was able to generate tautomers from structures in a friendly way.

Regards
