I am using the latest version of DW which was updated in Sep with an unofficial version.

While copying images in the 2D view with a larger font size, the complete X axis is sometimes missing.

See the circled portion of the attached image.

Dear Sansun,

except for releases to fix a bug, the unoffical versions of DW are updated about twice a month. At present, [2022-12-17 Sat] is the most recent one. Does the issue you report still occur with this version?

Norwid
