Hello,
I would like to know if it is possible to calculate the number of days or weeks between two dates? If yes how? And in general what is the general format for date?

Many thanks

Zioubi

If you have a table with two date columns like the following

Date1 Date2
10-Jan-2020 10-Jan-2021
15-Jan-2020 18-Jan-2021
22-Jan-2020 10-Feb-2020

and use "Data->Add Calculated Values..." with formula "Date2-Date1", then you get a new column as:

Date1 Date2 Delta
10-Jan-2020 10-Jan-2021 366
15-Jan-2020 18-Jan-2021 369
22-Jan-2020 10-Feb-2020 19

DataWarrior has no defined date format. It uses a plausibility check whether a column is likely to contain date values. If a column contains three values in a consistent format, and if two values are in the range 1-31, 1-12 (or English three letter month abbreviations), and the third looks like a year, then a column is interpreted as date values.
