I am running manjaro 6.4.2-3 KDE plasma 5.27.6-1 with openjdk version "20.0.1" 2023-04-18. After downloading the tar\_gz and following the steps in the readme.txt I get the following errorcode upon launching datawarrior

execvp: Exec format error

unfortunately the error message does not give more than that.

I don't have Manjaro and cannot try, but a Google search revealed that sometimes you error appears on KDE in Manjaro, when scripts expect the bash, because the default is zsh. Can you add '#!/bin/sh' or '#!/bin/bash' (without single quotes) as a first line to your '/opt/datawarrior/datawarrior' script and try again?

Both '#!/bin/sh' and '#!/bin/bash' (without the single quotes) work as a solution.

Thank you for the reply. Somehow it did not occur to also search for the error and plasma.
