Hello

I am trying to delete excess confomers I have made. These clutter the detail area.
I add new chemicals to my database, but then want to generate new conformers to make sure the whole database has them. Is there a way to delete old confomers across the database to only have the new ones? (see pic)
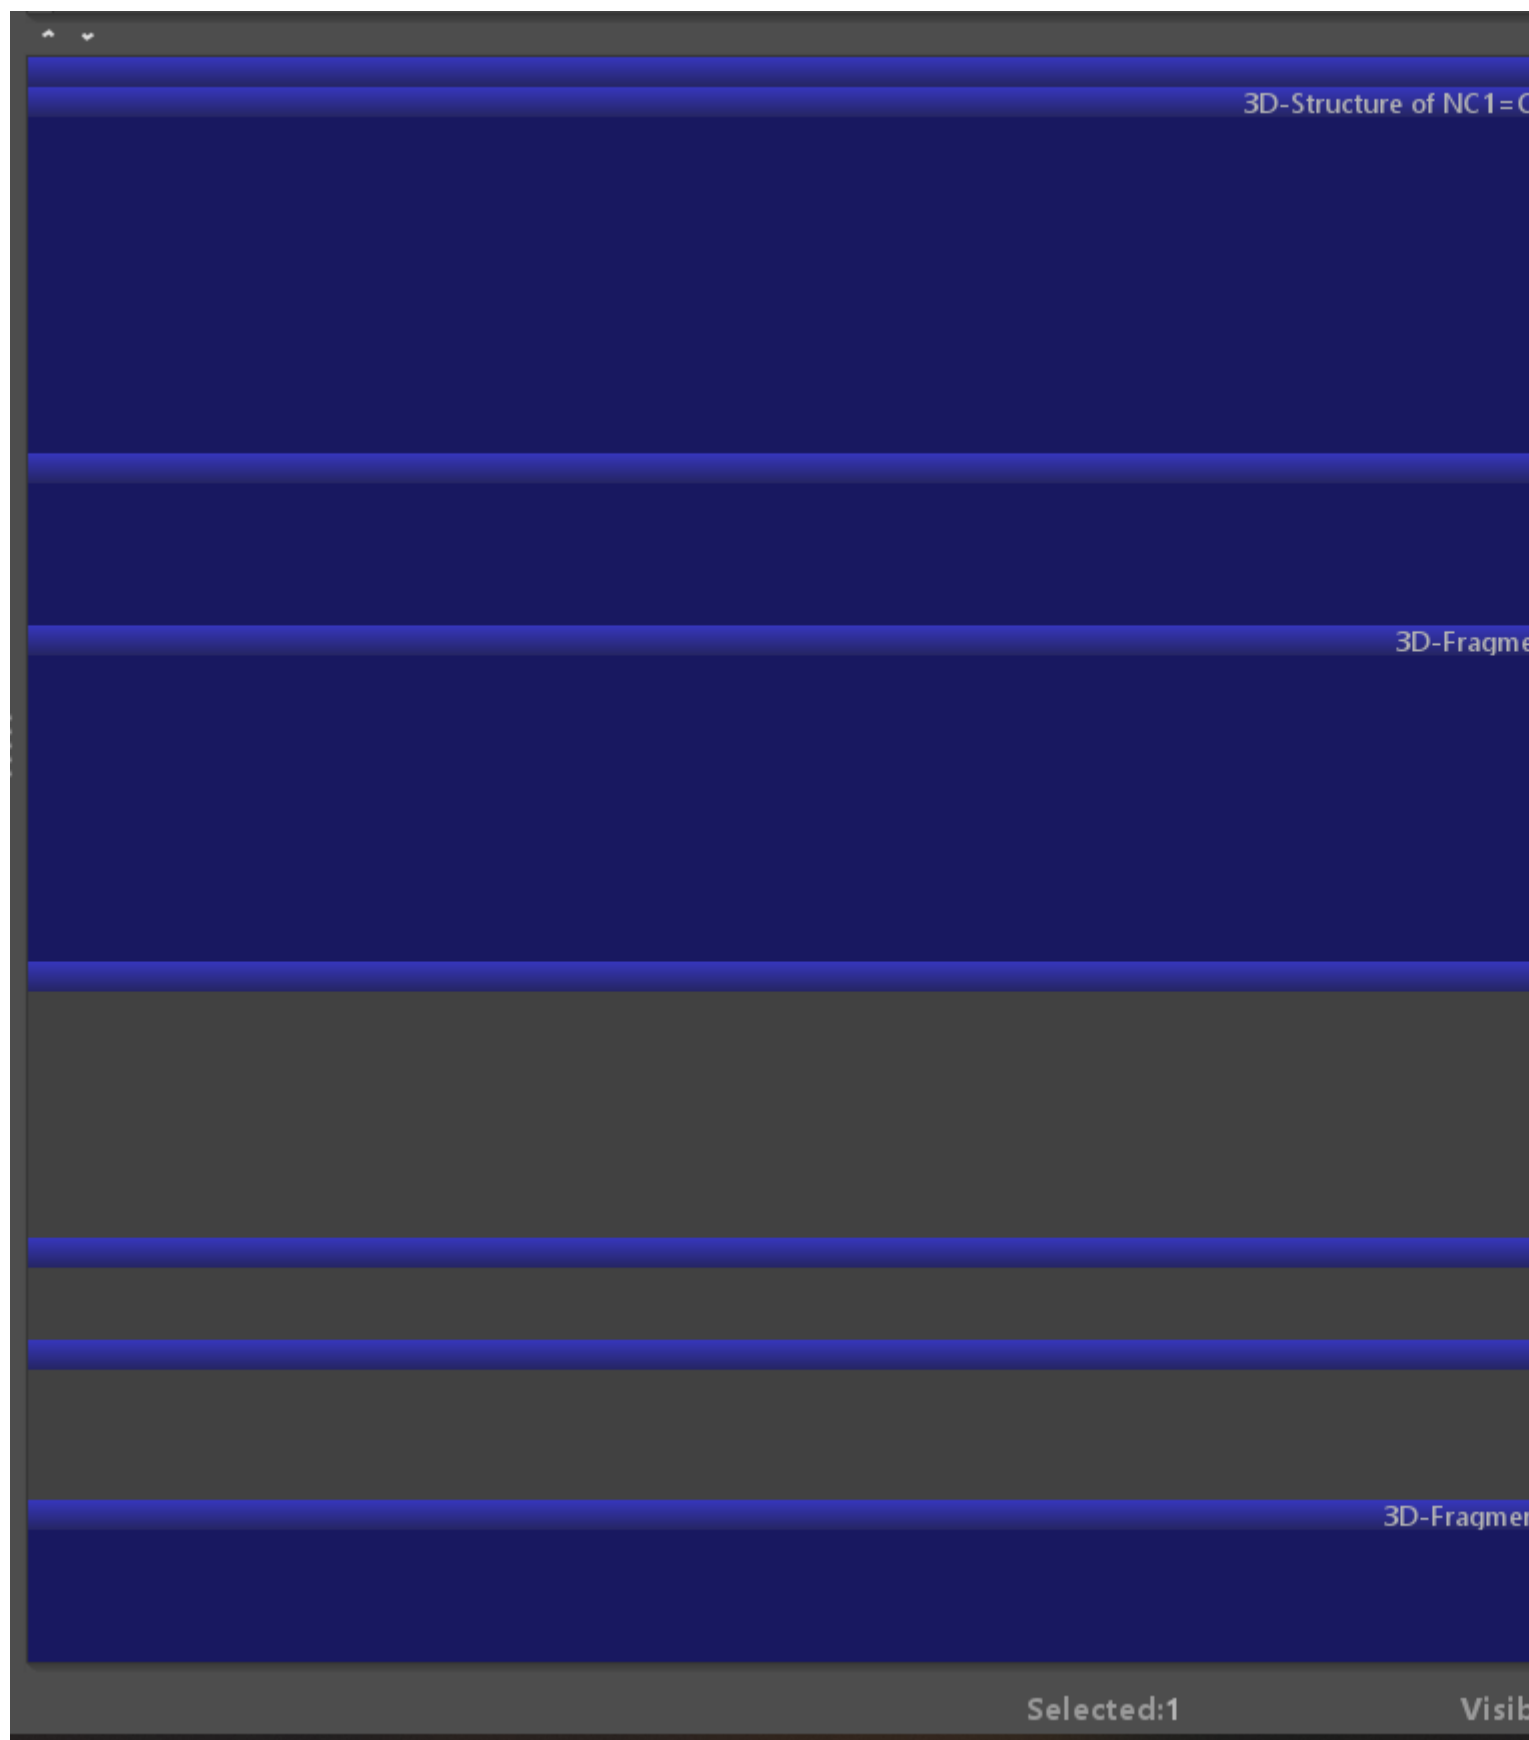

Can I do confomers for one molecule at a time if I add one or 2 to the database?

Many thanks

Data->Delete Columns...
Then select the 3D-coordinate columns you want to delete and press OK

Amazing! Seems obvious now!
Thank you
