Subject: Font Scale Not Adjusting

Hi,
I recently updated my DataWarrior version to v05.08.00 (built 19-Nov-2023) on Windows. When working with two screens (laptop and external monitor) which have different resolutions the fonts in the columns do not adjust when I drag them from one monitor to the next. So I either end up with a very large font or a very small font. Not sure I explained that very well.

Also, the new About splash screen seems to get stuck and is unresponsive to an 'Escape' press to remove it.

Many thanks in advance,

Angus

Hi Angus,

sorry for the late reply. It is true that DataWarrior does not adjust the dpi-resolution, when moving from one window to another, which is also true for the just released v6.0.0. I didn't think it through, but I would expect this as cross-platform functionality to take a significant effort. Maybe in v7.0.0. At least you may override the default choice in v6.0.0 and choose a resolution that hopefully serves as a compromise between your two monitors.

Thomas
