Subject: is there a way to continue a macro file on a saved file?

I have to use two macros rather than the one when trying to continue the macro after a Save Visible As dwar file.

for example
<task name="changeRangeFilter">
column=Small Rings
settings=4.0 6.0
animation=state=stopped low2=80% high1=20% time=10
duplicate=1
</task>
<task name="saveVisibleRows">
fileName=#ask#
fileType=dwar
</task>

the Table with only visible rows is well saved showing visible = total.
However, the macro continues only with the initial file using the total rows.
I need to continue the macro only with the visible rows! :(

I tried several alternatives like closing the original file and open the visible, but that stopped the program.

Is there any alternative way to do the Total and Visible dwar into the same macro?

Thank you for your attention

julio

I just found out one and easy solution :), that allows to continue the macro by substituting any saving of visible row task:

<task name="deleteInvisibleRows">
</task>

Thanks for your attention
