Subject: retreive data from sqlite database?

Hi,

I'm wondering if it's possible to query an SQLite database directly from DataWarrior?
e.g. I'd like to search the Probes&Drugs database dump:
https://www.probes-drugs.org/download

Can this be done with the current version (e.g. by installing a driver)? Or does this require a change to the program itself?

I think I've found an answer by looking at the code on github.
SQLite is not supported.

(I'm not familiar with Java, so please correct me if I'm wrong)
