Subject: Uncaught Exception: Null Stroke

I've recently been getting an "Uncaught Exception: Null Stroke" error message that persists even if I try to close the error window. I'm forced to close the entire program via the task manager.

It happens with multiple files that, up until recently, I've never had any problems with.

Is there anything I can do to fix this?

I have never seen that and I need to reproduce the problem to be able to fix it. Can you exactly guide me how to reproduce the problem possibly with a small example file? Which OS and DataWarrior version do you use?
