Freshly installed DataWarrior, no error during installation, checked the box Launch DataWarrior and clicked Finished. DataWarrior doesn't launch.
Tried to launch with Administrator rights, same issue. Nothing show up on the Task bar and in the Task Manager I don't see any application relating to DW.

Event Viewer:
- Exception Code: 0xc0000005
- Fault Offset: 0x00000000000046b20
- Faulting Process ID: 0x4394

Any clue?

Do you have any security software running (e.g. Sentinel One) that may prevent DataWarrior from starting?

I've already checked with our MSSP, nothing is blocking in their logs but we are using Sentinel One. Is there something specific between DW and S1?

It was reported earlier multiple times that S1 is preventing DataWarrior from starting without any message or useful log entry. You may try to whitelist DataWarrior.

Will ask to whitelist DataWarrior and let you know if it works. Thanks!

Thanks alot, after asking cyber to whitelist the application on their end it started working on the pc.

Still weird that S1 doesn't show anything saying it's blocked or whatsoever.

You've been really helpfull. I wish you a great day! :)
