Is there a way to embed SQL Database credentials in Data warrior template so that the users need not enter credentials every time they open the dashboard ?

Currently, the macro task 'Run SQL Query' does not store any credentials. With a template this cannot be done, either. Maybe, some database systems allow passing credentials with the connects string?

I have added 'user' and 'password' as optional parameters to the task 'Run SQL Query'. There is no user interface to use that, but from version 6.2.2 (due possibly in early August) you could edit a macro and add these two parameters to 'Run SQL Query' tasks using a text editor.
