I can download and install DW successfully. When I open DW a banner appears that I can't get rid of and prevents me from using DW. Banner appears to be an add for enamine real space, alpherion hyperspace, chemspace and freedomspace.

Hi Thomas,

I did both but nothing is functional. If I open a DW file I can see that the data in uploaded but I still can't get past the add banner! Kind of driving me crazy!!!

Chris

Hi Thomas

I have the same issue as above, is there a way to fix this?

Best,
Alex

Hi Alex,

most people don't have an issue and I don't have an explanation, the add doesn't close. Which OS do you use? Dis you try running DataWarrior from the command line and do you get any messages?

What you could try is to update manually:
- download an up-to-date datawarrior jar file, Currently, the newest is v06.02.03, which you can get with this URL:
   openmolecules.org/datawarrior/update/datawarrior_v06.02.03.j ar
- Normally this would go into the 'update' folder, which is in a different location for every platform and it is not there,
   if DataWarrior never updated before, e.g. in your case. Therefore, I recommend to rename the file to 'datawarrior_all.jar'
   and put it into the datawarrior installation folder, where it replaces the original file with that name.

After the update you can also use the 'ESC' button to close messages and apps. If you cannot close the message after the
update using 'ESC', then something outside DataWarrior must be preventing it e.g. by not allowing mouse or keyboard input to reach the program. In that case please let me know, whether starting from the command line produces any error messages...

Hope this helps...

New to this & had the same issue. After hearing "pinging" when clicking the screen or trying "esc", found if I forced the launch to appear on a bigger monitor, there are little "close" buttons that you don't see on a laptop screen. After closing a series of ~3 ads, DW works fine!

I found that pressing TAB once and then the SPACE key should close the dialog as well.
