Dear all,

would there be anywhere the list of SMILES / SD file considered in the assessment of PAINS patterns (in compound properties calculations)?

I checked the documentation, website and forum, but was not able to find it.

Best regards

Hi,

Attached is a list with the 480 PAINS in SMARTS format as originally published by Baell et al. These have been curated by Greg Landrum. I presume DW uses the same definitions. If a structure hits any of these it is considered a PAIN.

BW/Evert
