Just updated Datawarrior to v06.04.01 and see this error occassionally while working with a dataset that was a product of several merges.

"Uncaught Exception: Index 9 out of bounds for length 9"

It appears and I click OK and nothing seems to happen. But every so often while working with it it keeps popping up. Any ideas?
Thanks for a great application, I love the new stuff!
Greg

it sounds like one of the view update threads didn't get that the number of rows or column was reduced because of deletion or merging and it tries to draw that non existing row or column. This is not critical, but annoying. If you know how to reproduce the error with a defined procedure, please let me know.
