Hello

i am running DW on a Macbook metal (OS = Ventura), all DW commands (v06.04.02 - built March 2025) work ok but Dock structures...The window shows up but then the right mouse click does nothing on my machine, i have no mouse but the right mouse is usually via the control key and pad.

Not sure if other users have this problem on a Mac? Could it be the OS?

Many thanks

So I found a mouse and it works. So it is the touchpad. Usually with control or option or...shift, the right mouse click works ok with Datawarrior. It is only in my case the window Dock structures into protein cavity. Strange but with a mouse, it runs nicely.
