Dear Thomas

DWv5.5 works well on my OS.

After upgrade DL of DW6.1. I am getting the message:

DataWarrior v6.1 cannot be opened because the developer cannot be verified.

If already treated in previous posts, please direct me to the answer how to fix it.
Many thanks

Regards
Carsten

Dear Carsten,

can you amend your observation with a note if "my OS" refers to Windows 11 (as here[1]), or Mac Sequoia (as here[2]), or another (e.g., an instance of Linux you may reach a) by a double-boot installation side-by-side with Windows, or b) a WSL within a running instance of Windows)?

Eventually, updates running from within DW should provide you DW in version 06.04.02 built by March 17th, 2025.

Regards,

Norwid
